

Process Flow and Data Validation Logic for Accomplishing the Electronic School Form 7 (eSF7) through InsightED

For School Year 2026 – 2027

Introduction

The introduction and implementation of the Electronic School Form 7 (eSF7) mark a significant advancement in how the Department addresses challenges in data collection, consolidation, analysis, and reporting. The eSF7 streamlines and modernizes these processes, ensuring consistency, efficiency, and accuracy in data capture and management.

The tool expands the scope of data collection by capturing comprehensive personnel profiles and detailed work assignments, providing a deeper understanding of the roles, responsibilities, and workload distribution of school personnel. Furthermore, it enables easier consolidation of data across all governance levels, supporting macro-level analysis and evidence-based decision-making.

In summary, the eSF7 aims to:

- Digitize school-level personnel data management processes;
- Promote fair and equitable distribution of teaching loads;
- Improve the efficiency of capturing and managing school personnel information; and
- Support data-driven human resource planning and decision-making.

Features of the Improved and Expanded eSF7

The eSF7 tool captures and manages various information related to school personnel, including:

1. Basic Personal Information

Captures personnel demographic and identification details.

2. Education, Trainings, and Certifications

Records educational background, professional qualifications, and trainings attended to help assess teacher quality, support learner outcomes, and identify possible interventions and professional development opportunities.

3. Employment Information

Captures employment-related details to support personnel deployment and workforce management.

4. Work Assignment and Schedule

Records personnel assignments, schedules, and workload distribution to facilitate workload analysis and identify necessary interventions.

5. Workload Computation

Through the eSF7, the time spent by personnel on various tasks is automatically computed and categorized accordingly, including:

- Teaching Load
- Teaching Overload
- Teaching-Related Tasks
- Administrative Tasks

These computations provide a clearer picture of personnel workload distribution and support more informed planning, monitoring, and decision-making.

In using the eSF7, schools are provided with the opportunity to review personnel profiles and consider factors that may affect work assignments. For instance, the tool allows schools to examine teachers' qualifications and pedagogical competencies in relation to the learning areas they are assigned to teach, particularly in terms of specialization and subject matching. Likewise, it enables the assessment of non-teaching personnel in relation to their designated functions and daily tasks.

Through these features, the eSF7 provides schools with a clearer view of their available manpower resources, helping identify staffing gaps, deployment needs, and possible interventions to improve personnel management and assignment practices.

Data Input Process

MS Excel-Based Application vs. Digital Information System

The eSF7 captures a wide range of personnel-related data, making the accuracy of data entry a critical component of the process. While the tool has been enhanced with validation mechanisms, logical checks, and automated error flags to help ensure the correctness and consistency of encoded information, it remains an MS Excel-based application and relies largely on manual data entry.

As such, users are encouraged to exercise due diligence in verifying the accuracy and completeness of all information entered into the system. The built-in validation features are designed to assist schools by identifying potential errors, inconsistencies, and missing data; however, they do not replace the user's responsibility to ensure that the encoded information accurately reflects official records.

By utilizing a system that incorporates robust validation logic and real-time error detection, schools can improve the quality of their submissions and contribute to the generation of accurate, reliable, and evidence-based data for personnel planning, analysis, and decision-making.

In recent years, the Department has intensified its efforts to develop and strengthen digital information systems that connect schools with Schools Division Offices, Regional Offices, and the Central Office. These systems facilitate the timely collection, consolidation, and analysis of data that support policy development, resource allocation, and strategic decision-making across the education sector.

One such platform is InsightED, an information system developed by the Bureau of Human Resource and Organizational Development (BHROD) that captures and manages real-time data on school personnel and infrastructure. To maximize the benefits of digitalization and improve data management processes, the collection of Electronic School Form 7 (eSF7) data has gradually transitioned to InsightED.

The adoption of InsightED has resulted in improved submission rates, enhanced data accessibility, and more efficient consolidation of personnel information across governance levels. More importantly, it

serves as a foundational step toward the transition from file-based reporting to a centralized and integrated information management system, enabling more timely, accurate, and data-driven decision-making.

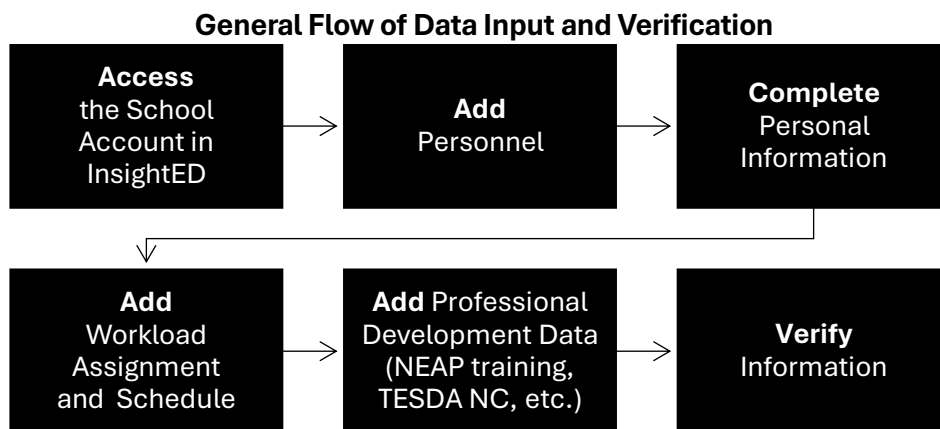

Recognizing the opportunities presented by this transition, the Department continuously explores ways to enhance both the functionality of the eSF7 and the overall user experience. The proposed process and logic flow for accomplishing the eSF7 through InsightED is intended to streamline data entry, strengthen data validation, minimize encoding errors, and further improve the quality and reliability of personnel data submitted by schools.

Expanding the eSF7 Hub on InsightED

The eSF7 Hub on InsightED, which was initially developed to facilitate the submission of accomplished eSF7 files in the previous school year, has been enhanced and expanded to support direct data entry, validation, and access to personnel information within the platform.

Building on its original function as a submission portal, the expanded eSF7 Hub now serves as a centralized workspace for managing eSF7 data. This enhancement enables schools to encode, review, and maintain personnel information directly in InsightED, reducing dependence on standalone files and improving the efficiency of data management processes.

To ensure continuity and ease of adoption, the established process flow for accomplishing the eSF7 has been retained and integrated into the system. The corresponding data entry procedures, validation rules, and reporting requirements have been translated into digital workflows within InsightED, allowing users to accomplish eSF7 requirements through a more streamlined, accessible, and user-friendly platform.

To ensure that the transition from a file-based tool to a digital information system preserves data integrity and quality, InsightED implements a logical sequence of data entry, validation, and verification processes. The enhanced eSF7 Hub incorporates built-in validation mechanisms, workflow controls, and data dependencies that guide users throughout the encoding process and help minimize errors and inconsistencies.

The enhancement of the eSF7 Hub is therefore guided by the following data input and validation logic:

I. Access the School Account in InsightED

Upon accessing the school's account in InsightED, key school information is automatically populated in the system. This minimizes repetitive data entry, promotes consistency across submissions, and reduces the likelihood of encoding errors.

The following information is pre-filled:

- a. School ID**
- b. School Name**
- c. Region**
- d. Division**
- e. District**

The following information shall be provided by the school:

- f. Number of Shifts**
- g. School Year**
- h. Modified Curricular Offering (MCOC)**

Schools are encouraged to verify the accuracy of the pre-filled information and update it as necessary should any discrepancies be identified. Any modifications to the pre-filled school information are subject to verification by the respective SDO-Planning Officer.

II. Add Personnel

This step allows schools to add new personnel who are not yet available in the system.

Since personnel records from previous eSF7 submissions have already been uploaded to InsightED, existing personnel profiles are readily available for schools to review and update as necessary. This eliminates the need to re-enter personnel information that has already been captured in prior submissions.

In cases where newly hired, transferred, reassigned, or returning personnel are not yet reflected in the school's roster, users may add their profiles to the system. Once the necessary personnel information has been encoded and validated, schools may proceed to the succeeding steps of the eSF7 accomplishment process.

When adding a new personnel record, the following minimum information is required:

- a. Taxpayer Identification Number (TIN)**
- b. First Name**
- c. Middle Name**
- d. Last Name**

If the personnel have not yet been issued a TIN at the time of encoding, select the "No TIN" checkbox. The system will automatically generate a temporary system-assigned identifier, which may be replaced with the official TIN once it becomes available.

The TIN serves as the primary unique identifier for personnel records. Schools are therefore advised to ensure that the TIN is entered accurately to prevent duplicate records and maintain data integrity.

Add to the Validation Logic / Validation Rules

Since InsightED utilizes a centralized personnel database that consolidates records from all schools, the system performs automated duplicate checking whenever a new personnel record is created. As part of its validation process, the system compares information expected to be unique to each individual, including the TIN, DepEd account, and PhilSys Number. If a potential duplicate record is detected, the system will notify the concerned school(s) for verification. The personnel record will be temporarily enrolled in the system but will be flagged until the identified discrepancy has been resolved.

Likewise, existing personnel records from previously submitted eSF7 data are also subjected to duplicate validation. If duplicate identifiers are detected, the affected records will be flagged in the respective schools' InsightED accounts for verification and correction. Schools are expected to review and update these records to ensure that each personnel profile is uniquely and accurately identified.

These validation mechanisms help maintain the integrity of the centralized personnel database by ensuring that each personnel record is unique, accurate, and free from duplicate entries.

III. Complete Personal Information

This step requires schools to complete and verify the personal information of all personnel assigned to the school. The information collected in this section forms the foundation of the personnel database and supports analyses on workforce demographics, qualifications, deployment, and human resource planning.

The required information is organized into three major categories:

1. Personal Information
2. Employment
3. Education

Each category captures data that are essential for the analysis of DepEd school personnel at the school, division, regional, and national levels.

The data points for each category are as follows, guided by how these data should be treated and entered:

1. Personal Information

- a. TIN
- b. FIRST NAME
- c. MIDDLE NAME
- d. LAST NAME
- e. SEX AT BIRTH
- f. CIVIL STATUS
- g. SOLO PARENT
- h. RELIGION
- i. ETHNIC GROUP
- j. PHILSYS NO. (NATIONAL ID)
Input "N/A" if not yet available.
- k. BIRTHDATE (MONTH / DAY / YEAR)

Determines the age of the personnel based on the encoded birthdate. The system automatically computes the age and flags records with invalid or questionable values for verification.

2. Employment

The Employment section captures the personnel's employment status, position, deployment, and appointment details. Several fields are governed by dependency logic to ensure consistency with existing DepEd human resource policies and prevent duplicate or conflicting records.

a. POSITION

Indicate the personnel's current Position title.

b. DESIGNATION

Indicate the approved designation of the personnel. Indicate the personnel's officially approved designation, if applicable.

School Head Validation

For school heads, the role may be reflected through either the Position (e.g., School Principal) or the Designation (e.g., Teacher-in-Charge or Officer-in-Charge).

To ensure accurate school head records, the following validation rules shall apply:

- Only one (1) school head shall be designated for each school in InsightED. This shall normally correspond to the manager of the school's InsightED account.
- Schools with a Teacher-in-Charge (TIC) shall not have another Principal, Officer-in-Charge (OIC), or TIC simultaneously assigned as the school head.
- For clustered schools, the designated school head may be a Principal, OIC, or TIC; however, only one of these roles may be assigned to a school at any given time.

These validations ensure that each school has a single, clearly identified accountable school head.

c. FUND SOURCE

Select the personnel's source of funding. The selected fund source determines the applicable options for Nature of Appointment and Hiring Arrangement.

d. NATURE OF APPOINTMENT

Select the personnel's nature of appointment in accordance with existing Civil Service and DepEd policies. This includes appointments resulting from reclassification (Reclass), where applicable.

e. HIRING ARRANGEMENT

Select the applicable hiring arrangement, such as:

Permanent (Plantilla)
Contract of Service / Job Order (COS/JO)
Provisional

The available options may vary depending on the selected Fund Source and Nature of Appointment.

- f. EMPLOYEE NO.
Enter the personnel's assigned employee number.
- g. DEPED EMAIL
Enter the personnel's official DepEd-issued email address.

Do not use the school's official DepEd email account as a personnel email address.

To maintain the integrity of the centralized personnel database, all DepEd email addresses are subject to automated validation. The system cross-checks each email address against records across all schools to ensure that each personnel is associated with a unique and valid DepEd account.

Additional Information for DepEd Plantilla Personnel
(Applicable only to personnel with Fund Source: National)

- h. STATUS OF DEPLOYMENT
This field identifies the school where the personnel is currently rendering service.

For purposes of the eSF7, this refers to the personnel's actual reporting station ("warm body") rather than the education level or program to which the personnel are assigned.

For example, a teacher holding a JHS plantilla item but assigned to teach SHS within the same school shall still be tagged as Own Station, since the personnel continues to report to the same school.

To reconcile existing deployment records, particularly Clustered assignments and possible misclassifications in previously submitted data, the Status of Deployment field shall be reset for all personnel records upon implementation. Schools shall review and update the deployment status to reflect the personnel's current reporting arrangement.

Personnel Assigned to Clustered Schools

For personnel assigned to two or more schools, the personnel record shall be reflected in the eSF7 of all schools where services are rendered. To protect personnel privacy, only the Name, TIN, and DepEd email address shall be shared with the clustered schools.

The school where the plantilla item is officially lodged shall designate itself as the Original School. The Original School shall be responsible for completing and maintaining the personnel's complete profile and identifying the other schools where the personnel is currently rendering service.

To identify clustered schools, the Original School shall search and select the corresponding School ID and School Name from the list of schools within the same Schools Division Office and Schools District.

Once the clustered schools have been identified, the system shall notify the selected schools and make the shared personnel record (Name, TIN, and DepEd Email) available for acceptance.

Upon accepting the shared personnel record, clustered schools may assign the personnel's workload and other school-specific responsibilities. However, clustered schools shall not modify the personnel's basic profile information, as these data are maintained by the Original School.

The personnel record maintained by the Original School shall serve as the primary record for all clustered schools. Any updates to the personnel's profile made by the Original School shall automatically be reflected in the clustered schools.

Proper Tagging of Status of Deployment

Accurate tagging of the Status of Deployment, together with the correct identification of clustered schools, ensures that legitimate multiple-school assignments are properly recognized by the system. This prevents personnel records from being incorrectly flagged as duplicate entries while maintaining a single, consistent personnel profile across all participating schools.

[[another step]]

Transfer of Plantilla Item or Personnel

When a Plantilla Item or personnel is officially transferred from one school to another, the corresponding personnel record shall likewise be transferred through InsightED to ensure that the personnel record is maintained by the school where the plantilla item is officially lodged.

The receiving school shall initiate the personnel transfer request within the system. The originating school shall review and approve the request before the personnel record is transferred. Only upon approval may the receiving school update the personnel information, assign workloads, and manage the personnel's eSF7 records.

This transfer process shall apply regardless of the personnel's Status of Deployment. For example, a personnel whose deployment status is Clustered may be providing services to School A (originating school), School B, and School C, while the plantilla item is officially lodged in School A. If the plantilla item is subsequently transferred to School B, School B shall initiate a request to transfer the personnel record from School A through InsightED.

Although the personnel profile may already be visible to School B because of the clustered deployment, the transfer request remains necessary. This process formally designates School B as the school responsible for maintaining the personnel record, ensuring that future updates, workload assignments, and personnel information are managed by the school where the plantilla item is officially lodged. This also provides a documented record of the transfer and helps maintain the integrity and consistency of the centralized personnel database.

- i. DATE OF FIRST DAY OF SERVICE (MONTH / DAY / YEAR)
Enter the personnel's official first day of service in the Department of Education (DepEd).

Original Appointment to a Plantilla Position

From Non-Plantilla to Plantilla

For personnel who were initially appointed to a DepEd plantilla position after previously serving under a non-plantilla appointment (e.g., Contract of Service or Job Order), enter the effective date of their first appointment to a plantilla position. This shall be considered the personnel's original appointment for purposes of the eSF7.

- j. DATE OF LAST PROMOTION (MONTH / DAY / YEAR)
For personnel who have been promoted from one plantilla position to another with a higher Salary Grade (SG) (e.g., Teacher I to Teacher II), enter the effective date of the most recent promotion.

If not applicable, select "Not Applicable."

- k. DATE OF LAST LATERAL MOVEMENT (MONTH / DAY / YEAR)
For personnel who have moved from one plantilla position to another with the same Salary Grade (SG), enter the effective date of the most recent lateral movement.

If not applicable, select "Not Applicable."

- l. DATE OF FIRST DAY IN NEW STATION (MONTH / DAY / YEAR)
For personnel who have been officially transferred from one school to another, enter the effective date of their first day of service in the receiving school.

If not applicable, select "Not Applicable."

For personnel assigned to clustered schools, this field shall likewise be marked "Not Applicable," as clustered deployment does not constitute a transfer of station.

If a date is provided and "Not Applicable" is not selected, the system shall interpret the record as a personnel transfer. Accordingly, the system will generate a pending task for the receiving school to submit a Request for Personnel Record

to the personnel's previous school. The receiving school may proceed with managing the personnel's record only after the request has been reviewed and approved.

m. **GRADE LEVELS HANDLED**

For teaching personnel and related teaching personnel (**e.g., School Principals, Assistant School Principals, and Head Teachers**) with assigned teaching loads, select all grade levels handled by the personnel.

If School Heads or Head Teachers do not have an assigned teaching load, no grade level should be selected—this will help the system organize the teachers per grade level ensuring a more accurate data input.

For purposes of the eSF7, teaching load includes classroom instruction, class advising, remedial or enhancement classes, and other authorized teaching assignments (e.g., the ARAL Program).

The available grade level options are dependent on the school's Modified Curricular Offering. Only grade levels offered by the school shall be available for selection:

MCOC	Elementary Grade Levels	Junior High School Grade Levels	Senior High School Grade Levels
	Kinder, 1, 2, 3, 4, 5, 6	7, 8, 9, 10	11, 12
All Offering	✓	✓	✓
ES and JHS	✓	✓	
JHS with SHS		✓	✓
Purely ES	✓		
Purely JHS		✓	
Purely SHS			✓

Years of Teaching a Learning Area

(select school years, maybe?)

Revisit ECP

3. **Education**

The Education section captures the academic qualifications, professional eligibility, and licensure information of school personnel. To ensure data consistency and completeness, several fields are governed by dependency logic, where the information entered in one field determines the succeeding required fields.

a. **COLLEGE DEGREE FINISHED / BACCALAUREATE**

The personnel's bachelor's degree.

For personnel who completed a bachelor's degree in Education, the following fields are required:

- i. MAJOR
- ii. MINOR

For personnel who did not complete a bachelor's degree, select "N/A." The succeeding education fields that require a college degree as a prerequisite will be disabled to prevent invalid or unnecessary entries.

b. POST-GRADUATE DEGREE

Dependent on: College Degree Finished / Baccalaureate

Personnel who have completed a bachelor's degree may indicate their highest post-graduate degree, if applicable. This field captures the highest level of post-graduate education attained by the personnel, including master's units, master's degrees, doctoral units, doctoral degrees, and professional degrees (e.g., Bachelor of Laws [LL.B.] or Juris Doctor [J.D.]), where applicable.

If the personnel have not taken any post-graduate degree, "N/A" is selected.

c. DISCIPLINE

Dependent on: Post-Graduate Degree

If a post-graduate degree is indicated, the corresponding academic discipline or field of specialization must be selected. This field is disabled when "N/A" is selected for the post-graduate degree.

d. ELIGIBILITY

Dependent on: Position Title, Fund Source, Hiring Arrangement, and Nature of Appointment

Select the personnel's primary eligibility or professional qualifications. Multiple eligibilities may be selected.

- Primary Eligibility - select the eligibility that is most relevant to the personnel's current position or primary job functions.
- Other Eligibility - Other eligibility.

For Plantilla Item (NATIONAL Funding Source)

For teaching personnel whose funding source is NATIONAL and the nature of appointment is REGULAR, their eligibility must be indicated as either LET or PBET.

For related-teaching personnel whose position requires teaching experience (School Principal, Assistant SP, Head Teacher), their eligibility must be indicated as either LET or PBET.

For non-teaching personnel who may possess multiple eligibilities, schools should select the eligibility that is most relevant to the personnel's current position or primary job functions. LET or PBET may also be selected if this is the only eligibility they have.

e. PRC SPECIALIZATION

Dependent on: Eligibility

If the selected eligibility is based on the **Licensure Examination for Teachers (LET)** or the **Philippine Board Examination for Teachers (PBET)**, the corresponding PRC specialization becomes a required field.

For all other eligibility types, this field is automatically disabled or may be marked as "N/A," as applicable.

IV. Input Organized Classes

This step captures information on the school's organized classes for the current school year. The data entered in this section serves as the basis for validating teaching assignments, class advising responsibilities, and workload computations.

	K	1	2	3	4	5	6
Enrollment							
Classrooms							
Section (count)							
Section Name							
Adviser							
Add Section +							

a. Enrollment Size

Enter the current number of enrolled learners for each grade level.

b. Number of classrooms

Enter the total number of classrooms available or being used for each grade level, as applicable.

c. Sections and Class Advisers

For each grade level, enter the section names and assign the corresponding class adviser.

The list of personnel available for selection as Class Adviser is dependent on the Grade Levels Handled identified in the Employment section. Only teaching personnel who are assigned to the corresponding grade level may be selected as advisers.

Once the personnel is assigned as a class adviser, the system automatically adds the corresponding **Class Advising duties** and **Homeroom Guidance Program (HGP)** to the personnel's workload. These assignments shall be reflected in the succeeding step, where the corresponding schedule and workload details must be completed.

Likewise, the list of sections available to a teacher during workload assignment is limited to the grade levels assigned to that personnel. This validation ensures that teaching and advising assignments are aligned with the personnel's designated grade levels and promotes accurate and consistent data entry.

V. Add Workload Assignment and Schedule

This step captures the official workload assignments and work schedules of all school personnel for the current school year. The information entered in this section serves as the basis for workload computation, teaching load analysis, and personnel utilization.

For Teaching and Related-Teaching Personnel with teaching loads, both the Teaching Load Program and Non-Teaching Tasks Program are displayed.

For Related-Teaching Personnel without teaching loads and Non-Teaching Personnel, only the Non-Teaching Tasks Program is available.

Follow these major steps to complete this section:

1. Select personnel
2. Create or update personnel's program (workload and schedule)
3. Save personnel's program

These steps are broken down into specific steps:

1. Select the Personnel

To create or update a personnel's work program, complete the following in sequence:

- 1) Select the Position Group (Teaching, Related-Teaching, or Non-Teaching).
- 2) Select the Position Title.
- 3) Select the corresponding Personnel.

The list of available personnel is filtered based on the selected Position Group and Position Title, ensuring that only eligible personnel may be selected.

2. Create or update personnel's program (workload and schedule)

A. For Teacher Program (Teaching Load)

- 1) Select the Grade Level and Section.
- 2) Select the appropriate Learning Area/Subject.
- 3) Enter the corresponding class schedule, including the time and day(s) of the week.
- 4) Repeat the process until all teaching assignments have been encoded.
- 5) Click Save to record the personnel's workload.

The list of available Grade Levels, Sections, and Learning Areas is dependent on the personnel's assigned grade levels, the school's curricular offering, and the personnel's position.

Teaching Load

Applicable to Teaching Personnel and Related-Teaching Personnel with assigned teaching responsibilities.

Grade Level and Section	Subject / Task	Schedule		Days	Action
		Time Start	Time End	M T W T F S S	
		Daily Teaching Load (mins)		(per day)	

Teaching Load:

- Learning Areas per Grade Level
- Enhancement Classes
- Remedial Classes
- ARAL Program
- Class Advising Duties

The available teaching assignments are determined by the Grade Levels Handled previously specified in the Employment section. Consequently, only the grade levels, sections, and learning areas applicable to the selected personnel will be available for assignment.

This dependency ensures that teaching assignments are consistent with the personnel's designated teaching levels and prevents the assignment of classes outside their authorized grade levels.

Since Class Advisers per section have already been identified, the class advising duties and HGP will automatically be reflected in the teachers' workloads. Their respective schedules need to be updated.

Automatic Assignment of Class Advising

Since Class Advisers have already been identified in the Input Organized Classes step, the corresponding Class Advising duties and Homeroom Guidance Program (HGP) are automatically reflected in the assigned personnel's workload.

Schools are only required to complete the corresponding schedule for these automatically generated assignments.

B. For Non-Teaching Program (Teaching Load)

- 1) Select the Category. Multi-selection is allowed.
- 2) Select the appropriate Task.
- 3) Enter the corresponding task schedule, including the time and day(s) of the week.
- 4) Repeat the process until all assignments have been encoded.
- 5) Click Save to record the personnel's workload.

Non-Teaching Tasks

Applicable to all personnel.

Category (multi-selection is allowed)	Tasks	Schedule		Days	Action
		Time Start	Time End	MTWTFSS	
		Daily Workload (mins)		(per day)	

The system also captures non-teaching duties assigned to school personnel. The tasks available for assignment depend on the personnel's Position Group and Position Title.

Non-Teaching Tasks include:

- Teaching Related Assignments
- Administrative Tasks

Schedule Validation

To maintain the accuracy and consistency of workload records, the system performs the following validations:

- A personnel shall not be assigned overlapping schedules.
- A class or section shall not be scheduled for more than one subject at the same time.
- Only authorized personnel may be assigned to specific teaching or non-teaching tasks based on their position and assignment.
- Any scheduling conflicts detected by the system shall be flagged and must be resolved before the workload can be finalized.

3. Review and save personnel's program

UPDATING

Workload Actions

By default, all workload assignments are tagged as Active.

When a personnel is temporarily or permanently unable to perform assigned duties (e.g., due to leave, reassignment, or separation from service), the workload may be redistributed through the **Action** feature.

Before changing the action of any workload, schools shall first update the personnel's **reporting status** in the personnel profile (e.g., On Leave, Temporarily Not Reporting, or Permanently Not Reporting).

The Action feature becomes available only after:

- All personnel have been assigned their respective workloads; and

- The personnel's reporting status has been appropriately updated.

Available Actions

- **Active**
The default status indicating that the personnel continue to perform the assigned workload.
- **Transfer Workload**
Used to assign the workload to another personnel.

The transfer may be:

- **Temporary** – The workload is assigned to other personnel for a specified period and shall revert to the original personnel once they resume duty.
- **Permanent** – The workload is permanently reassigned to another personnel.

(Track Transfer Workload Logs) (Relieving duties)

Assigning the Transferred Workload

1. When transferring a workload, select the personnel who will assume the assignment.

The system validates eligible recipients based on the type of workload:

- **Teaching Load** – May be assigned to qualified teaching personnel and qualified related-teaching personnel, including School Principals, Assistant School Principals, and Head Teachers, provided they are authorized to carry teaching loads.
 - **General Non-Teaching Tasks** – May be assigned to any school personnel, regardless of Position Group, as deemed appropriate by the school head.
 - **Coaching and Mentoring Tasks** – May only be assigned to qualified personnel such as Master Teachers, School Principals, Teacher-in-Charge, Assistant School Principals, or Head Teachers.
2. Once the transfer is completed, the name of the receiving personnel is displayed alongside the transferred workload. To verify that the workload has been successfully reflected in the recipient's work program, select the personnel's name.

VI. **Add Professional Development Data (NEAP training, TESDA NC, etc.)**

VII. **Verify Information**

Data Validation Rules

To promote standardized and accurate data collection, InsightED employs dependency logic throughout the data entry process. This means that values entered in preceding fields under each step determine the available options, required fields, or validation rules for subsequent data points. By enforcing these relationships, the system minimizes encoding errors, prevents inconsistent entries, and ensures that personnel information is captured uniformly across all schools.

Schools are encouraged to complete all applicable fields and verify the accuracy of the information before proceeding to the succeeding steps. Fields that are not applicable should be indicated accordingly, as prescribed by the system.
